

The Solution for your Crawl Space **Sump Pump Systems**

One of the most important parts of any waterproofing system is a reliable drainage system. Although in some cases a drainage system may be installed without a sump pump, most basements and crawl spaces require a sump pump to ensure your home stays dry. Our Sump Pump System is built using only the highest grade of materials to ensure quality and lasting performance.

System Features

- **3/4 hp cast iron sump pump - Pumps up to 5,150 gallons per hour. Solid cast iron construction is durable and will not rust.**
- **14", 40 gallon basin - Prevents sump pump from turning on too frequently increasing the lifespan of the pump**
- **Durable basin lid - Able to hold over 400 lbs.**
- **Recessed floor drain - Installed in lid to capture water in case of any broken pipes other pipes other forms of flooding that may occur**
- **Lifetime Manufacturer Warranty**

Optional Features

- **Water Level Alarm**
- **Battery Backup**
- **Radon Gas Kit**

Dehumidification Systems

To alleviate and excessive humidity in the crawl space we install state of the art industrial performance dehumidification system.

System Features

- **Operates in low temperatures**
- **Whisper quiet operation**
- **Commercial grade metal housing**
- **Ductable vents**
- **Easily maintained**
- **Ultra efficient, low annual operating cost**
